WHAT'S NEW in this issue?

AFRICAN REGION**Egypt**

- Confirmed H5 HPAI outbreaks in poultry (Menofia and Giza)
- Suspected HPAI outbreaks in poultry (Menofia)

ASIAN REGION**Bangladesh**

- Suspected H5N1 HPAI outbreaks in poultry (Dhaka)

Bhutan

- Confirmed H5N1 HPAI in poultry (Chukha)

Indonesia

- Suspected H5N1 HPAI outbreaks in poultry (Bengkulu)

Viet Nam

- Suspected and confirmed H5N1 HPAI outbreak in poultry (Dien Bien)

NOTE: UPDATED INFORMATION IS INDICATED IN RED**AFRICAN REGION****Egypt****OFFICIAL**

21/10/12 – Confirmed H5 HPAI outbreaks in poultry, Giza and Menofia (FAO Field Officer)

Between 10 and 17 October 2012 H5 HPAI was detected in unvaccinated ducks in a live bird market in Giza Governorate and in a household ducks of unknown vaccination status in Menofia Governorate. The outbreak in Giza Governorate was detected targeted surveillance; the outbreak in Menofia Governorate was detected through community-based animal health outreach (CAHO).

16/10/12 – Confirmed H5 HPAI outbreaks in poultry, Menofia, and Giza (FAO Field Officer)

Between 4 and 9 October 2012 H5 HPAI was detected through active surveillance in unvaccinated birds in two live bird markets in the Governorates of Menofia (in geese) and Giza (in ducks)

NON-OFFICIAL**21/10/12 – Suspected H5 HPAI outbreaks in poultry, Menofia (Media)**

HPAI was suspected in a live bird market in Menofia Governorate. The Veterinary Medicine Department manager in Menofia Governorate declared the discovery of avian influenza inside the birds market in Quasna city. Samples from the birds sent to the national laboratory tested positive.

ASIAN REGION**Bangladesh****NON-OFFICIAL****24/10/12 – Suspected H5N1 HPAI outbreaks in poultry, Dhaka (Ministry of Agriculture and Forestry)**

About 4,000 chickens were culled at a poultry farm at Pabur village in Kapasia Upazila, Gazipur District, Dhaka Division on Tuesday night [23 October 2012] after they were found to be affected by Avian Influenza virus. Sources at the district livestock office and the Poultry Farm said 3,977 chickens were culled after 10 pm and the culled chickens were buried. The chickens were culled to contain the spread of Avian Influenza within 12 hours of confirmation that the farm was affected by Avian Influenza virus, the sources added.

Bhutan**OFFICIAL****17/10/12 – Confirmed H5N1 HPAI outbreaks in poultry, Chukha (Ministry of Agriculture and Forestry)**

An outbreak of H5N1 HPAI was confirmed in poultry from Rinchening, Phuntsholing, Chukha District on 16 October 2012. Samples received at the national reference laboratory at Serbithang tested positive for H5N1 HPAI by real time Reverse Transcriptase Polymerase Chain Reaction (rRT-PCR). Detailed investigation of the affected area revealed that approximately 14 birds died during the past week [the week of 8 October]. Once the cases were reported to be positive for H5N1 HPAI, the National Centre for Animal Health (NCAH) immediately informed the Regional Veterinary Officer of the Regional Livestock Development Centre, Tsimasham who is leading the control operations in Phuntsholing. Currently, there are only about 30 birds at risk of exposure to the disease at the outbreak location. The dead birds were disposed properly following standard operating procedures in the National Influenza Pandemic Preparedness Plan of the ministry. Officials reported that samples have been sent to the regional reference laboratory in India for further confirmation.

<http://www.moaf.gov.bt/moaf/?p=11780>

Indonesia**NON-OFFICIAL****24/10/12 – Suspected H5N1 HPAI outbreaks in poultry, Bengkulu (Media)**

A total of 103 birds in the area tested positive for avian influenza virus since the beginning of October 2012. Hundreds of birds were found positive for H5N1 HPAI in seven villages surrounding Bengkulu City. Poultry also died suddenly in villages in Mukomuko Regency. To prevent further spread of the virus, Agricultural and Animal Husbandry Department of Bengkulu City plans to spray disinfectant on areas of known cases of H5N1 HPAI. In addition, they requested that citizens hand over their chickens to be destroyed. However, most people are unwilling to hand over the surviving poultry to be destroyed voluntarily.

Nepal**OFFICIAL**

14/10/12 – Confirmed H5N1 HPAI outbreak in poultry, Bagmati (OIE – World Organisation for Animal Health)

An outbreak of H5N1 HPAI was reported in Sanepa-2, Sanchal, Lalitpur, Bagmati Zone [periphery of Kathmandu City] in a commercial layer farm rearing a dual-purpose breed of different age groups. The outbreak started on 27 August 2012. Of the total susceptible population of 2 500 poultry, all of them have died. Samples tested positive by PCR at the national laboratory on 3 September. Control measures have been completed; Follow-up surveillance activities are being carried out throughout the country.

NON-OFFICIAL

15/10/12 – Suspected H5N1 HPAI outbreaks in poultry, Bagmati (Media)

Authorities have confirmed an outbreak of H5N1 HPAI at a poultry farm in Bode-3 in Bhaktapur, Bhaktapur District, Bagmati Zone. Around 1 400 chickens have died out of 2 200 [susceptible] chickens in the farm. The health officials from the Animal Health Directorate culled the remaining birds after a meeting this morning. The samples of the dead chickens were sent to the laboratory for testing five days ago. [Bhaktapur is a town located approximately 17 km from Sanchal where the abovementioned outbreak occurred.]

Viet Nam**OFFICIAL****25/10/12 – Confirmed H5N1 HPAI outbreaks in poultry, Dien Bien (Department of Animal Health – DAH))**

An outbreak of H5N1 HPAI (mentioned by media below) was detected on 12 October 2012 in Noong Luong Commune, Dien Bien District with 1.107 birds affected which are composed of 953 ducks, 127 chickens and 27 Muscovy ducks (Cairina moschata). Province Veterinary Service and local authority has culled all of birds affected and applied the controls measures.

NON-OFFICIAL**19/10/12 – Suspected H5N1 HPAI outbreaks in poultry, Dien Bien (Media)**

Cases of H5N1 HPAI have been reported in Noong Luong Commune, Dien Bien District in the northern mountainous province of Dien Bien. The outbreak was discovered last Friday [12 October 2012] in two households in the commune's Village 12, with nearly 720 poultry suffering from the disease. Three days later, local authorities discovered nearly 400 other poultry infected with the H5N1 virus in Village 15. Since the outbreak, authorities have detected and culled more than 1,000 sick poultry in the commune. The province banned sick poultry from being transported, processed and traded out of the affected area, and closely supervised slaughter and trade in other districts and communes of the province. The provincial People's Committee also quarantined the affected areas, and counted the number of poultry, especially ducks in Noong Luong Commune and Muong Thanh District, to ensure that the

epidemic does not spread. The Department of Agriculture and Rural Development also gave guidance on carrying out preventive measures such as sterilization of farms where infected poultry have been reported.

Ukraine	Reported: 02/12/05 Krym	Observed: 11/02/08 Reported: 13/02/08 Krym	wild birds, domestic poultry	
United Kingdom	Observed: 05/04/06 Reported: 06/04/06 Scotland, Central	Reported: 29/02/08 England, Dorsetshire	wild birds, domestic poultry	

25 April - 25 October 2012

Highly Pathogenic Avian Influenza H5 confirmed outbreaks

CONTACTS

The HPAI Situation Update compiles data on Highly Pathogenic Avian Influenza outbreaks. It is updated weekly, published in PDF format and automatically sent by email to a list of subscribers. We have received many requests to join the *HPAI Situation Update* distribution list. While we highly value the growing interest and wider distribution, it is hard for us to manage the increasing list of contacts. We would therefore appreciate if the contacts in each organisation/country could forward the document to all relevant people within their organisation/country.

The ECTAD HPAI Situation Update has been prepared by the EMPRES (Emergency Prevention Programme for Transboundary Animal Diseases) / GLEWS (Global Early Warning for Major Animal Diseases, including Zoonoses) team of the Animal Production and Health Division of the Food and Agriculture Organization of the United Nations.

Additional information on the outbreaks can be found in EMPRES-i (<http://empres-i.fao.org/>). Electronic version of the maps can be found on the website at http://www.fao.org/ag/againfo/programmes/en/empres/maps_new.html

For further information about the FAO HPAI Situation Update please contact the EMPRES/GLEWS team of FAO GLEWS@fao.org

DISCLAIMER

FAO compiles information from numerous sources (FAO representatives or country missions, FAO reports, OIE, official government sources, European Commission, **FAO** reference centres, laboratories and FAO collaborators) and produces these composite maps in a representative effort to provide full and accurate information.

FAO welcomes information to clarify disease or infection occurrence in areas that have not been properly depicted (with supporting documentation to make the required changes based on FAO validation and verification procedures). If you want to share relevant information on animal diseases events with GLEWS please send messages to GLEWS@fao.org

MAP: The maps represent occurrences of confirmed or suspected cases of H5 and H5N1 reported over the last 30 days (1st map) and last six months (2nd map). H5 cases are represented for countries where N-subtype characterization is not being performed for secondary cases or when laboratory results are still pending. The original data have been collected and aggregated at the most detailed administrative level.

TEXT: The text represents information obtained within the past 14 days indicating the original date of reporting or publishing of the information. Sources of information are included for easy reference. FAO does not guarantee the accuracy of non-official reports.

TABLES: The outbreaks presented in the tables are referring to the observation date (or the earliest clinical date known) and reported date of the first and last occurrence of an outbreak/case in a country. The affected populations refer to all populations ever affected. The reported date is the date when the occurrence of a disease has been confirmed by an official source. Outbreak of disease or infection means the occurrence of one or more cases of a disease or an infection in an epidemiological unit.
