07/11/12 – Confirmed H5 HPAI outbreaks in poultry, Giza and Menofia (FAO Field Officer)

Between 17 October and 4 November 2012, eight H5 HPAI outbreaks were detected in poultry in Menofia (5) and Giza (3) Governorates. Five outbreaks were detected in poultry in live-bird markets in Menofia (3) and Giza (2) and three outbreaks were detected in households in Menofia (2) and Giza (1). Poultry were not vaccinated where in seven of the outbreaks; and in one household, the vaccination status was unknown. The outbreaks in Giza were detected through active and passive surveillance and the outbreaks in Menofia Governorate were detected through active surveillance and community-based animal health outreach (CAHO).

NON-OFFICIAL

30/10/12 – Suspected H5 HPAI outbreaks in poultry, Menofia (Media)

The Directorate of Veterinary Medicine of Menofia, declared on Sunday [28 October 2012] morning the detection of a new avian influenza case in Ashmoun public market. Within the campaign organized by the directorate for this purpose,

NOTE: UPDATED INFORMATION IS INDICATED IN RED

samples were collected from the birds from villages and districts; the samples were tested positive for HPAI. Culling and disposal (burial) of infected birds is underway coupled with market disinfection. Samples from persons in direct contact with birds were taken and are being tested.

Bangladesh

NON-OFFICIAL

24/10/12 – Suspected H5N1 HPAI outbreaks in poultry, Dhaka (Ministry of Agriculture and Forestry)

About 4,000 chickens were culled at a poultry farm at Pabur village in Kapasia Upazila, Gazipur District, Dhaka Division on Tuesday night [23 October 2012] after they were found to be affected by Avian Influenza virus. Sources at the district livestock office and the Poultry Farm said 3,977 chickens were culled after 10 pm and the culled chickens were buried. The chickens were culled to contain the spread of Avian Influenza within 12 hours of confirmation that the farm was affected by Avian Influenza virus, the sources added.

Highly Pathogenic Avian Influenza H5 confirmed outbreaks

08 May - 08 November 2012

CONTACTS

The HPAI Situation Update compiles data on Highly Pathogenic Avian Influenza outbreaks. It is updated weekly, published in PDF format and automatically sent by email to a list of subscribers. We have received many requests to join the *HPAI Situation Update* distribution list. While we highly value the growing interest and wider distribution, it is hard for us to manage the increasing list of contacts. We would therefore appreciate if the contacts in each organisation/country could forward the document to all relevant people within their organisation/country.

The ECTAD HPAI Situation Update has been prepared by the EMPRES (Emergency Prevention Programme for Transboundary Animal Diseases) / GLEWS (Global Early Warning for Major Animal Diseases, including Zoonoses) team of the Animal Production and Health Division of the Food and Agriculture Organization of the United Nations.

Additional information on the outbreaks can be found in EMPRES-i (<http://empres-i.fao.org/>). Electronic version of the maps can be found on the website at http://www.fao.org/ag/againfo/programmes/en/empres/maps_new.html

For further information about the FAO HPAI Situation Update please contact the EMPRES/GLEWS team of FAO GLEWS@fao.org

DISCLAIMER

FAO compiles information from numerous sources (FAO representatives or country missions, FAO reports, OIE, official government sources, European Commission, **FAO** reference centres, laboratories and FAO collaborators) and produces these composite maps in a representative effort to provide full and accurate information.

FAO welcomes information to clarify disease or infection occurrence in areas that have not been properly depicted (with supporting documentation to make the required changes based on FAO validation and verification procedures). If you want to share relevant information on animal diseases events with GLEWS please send messages to GLEWS@fao.org

MAP: The maps represent occurrences of confirmed or suspected cases of H5 and H5N1 reported over the last 30 days (1st map) and last six months (2nd map). H5 cases are represented for countries where N-subtype characterization is not being performed for secondary cases or when laboratory results are still pending. The original data have been collected and aggregated at the most detailed administrative level.

TEXT: The text represents information obtained within the past 14 days indicating the original date of reporting or publishing of the information. Sources of information are included for easy reference. FAO does not guarantee the accuracy of non-official reports.

TABLES: The outbreaks presented in the tables are referring to the observation date (or the earliest clinical date known) and reported date of the first and last occurrence of an outbreak/case in a country. The affected populations refer to all populations ever affected. The reported date is the date when the occurrence of a disease has been confirmed by an official source. Outbreak of disease or infection means the occurrence of one or more cases of a disease or an infection in an epidemiological unit.
