

Technical assistance for ideas related to climate change in ACP countries

The Climate Support Facility (CSF) of the Global Climate Change Alliance (GCCA) offers expert support to organisations in African, Caribbean, and Pacific (ACP) countries for short-term customised technical assistance and training.

The expert support is mobilised on demand to provide the customised technical assistance requested by beneficiaries in ACP countries.

Expertise is available in areas related to climate change to help with:

1. Trainings, workshops, capacity building
2. Project identification/formulation, feasibility studies
3. Assessment of projects and help to access funding
4. Policy development, strategies, roadmaps preparation

Anyone based in ACP countries can apply for support

The Climate Support Facility is open to anyone based in an ACP country: including public or private sector organisations, non-governmental organisations, civil society organisations and universities.

The procedure is very quick and simple

Once a request for technical assistance is submitted through the online form, the Climate Support Facility team will get back to the applicant in order to prepare the terms of reference of a technical assistance mission. Once the terms of reference are finalised and approved, the Climate Support Facility selects the experts in close consultation with you. As soon as the expert or team of experts is approved, the preparation of the mission can start. The mobilisation of adequate technical assistance can be therefore quick and, when the terms of reference are defined, the experts could be in the field within a month.

More information is available on: www.gcca.eu/intra-acp/climate-support-facility

Partners for Innovation can help to obtain this support

Partners for Innovation can help you to obtain the support of the Climate Support Facility and work out the terms of reference together with you.
