

Highly pathogenic avian influenza H5 events

05 November - 05 December 2013

Note: A map of H5 HPAI events during the latest six months is shown on the last page. Information on avian influenza A (H7N9) and other influenza types are not included in this map. **Source:** FAO EMPRES-i <http://empres-i.fao.org/empres-i/home>

The current map still displays only cases of H5 highly pathogenic avian influenza and does not yet cover all relevant cases/outbreaks of Animal Influenza in different species, as we are in a transition phase towards the production of new maps representing relevant animal influenza cases/outbreaks.

WHAT'S NEW in this issue?

AFRICAN REGION**Egypt**

- Confirmed H5N1 HPAI outbreak in poultry (Sharkia)

ASIAN REGION**China**

- Confirmed H5N3 LPAI positive findings in poultry (Province of Taiwan)
- Confirmed H7N9 infection in a human (Hong Kong SAR, Zhejiang)

Indonesia

- Suspected H5N1 HPAI outbreaks in poultry (Central Java)

Viet Nam

- Confirmed H5N1 HPAI outbreak in poultry (Quang Ngai)
- Suspected H5N1 HPAI outbreaks in poultry (Tien Giang, Vinh Long)

EUROPEAN REGION**Germany**

- Confirmed H5N3 LPAI outbreak in poultry (Baden-Wurttemberg)

Netherlands

- Confirmed H5N3 LPAI outbreak in poultry (Groningen)

Portugal

- Confirmed H7 LPAI positive findings in poultry (Alentejo)

NOTE: UPDATED INFORMATION IS INDICATED IN RED

11/28 & 03/12/2013 – Confirmed H7N9 infection in a human, Hong Kong, SAR and Zhejiang (National authorities)

- In Hong Kong, SAR, H7N9 infection was reported in a 36-year-old female Indonesian domestic helper. The patient took a day trip to Shenzhen, Guangdong Province, on 17 November 2013, and slaughtered chickens there. She fell ill on 21 November 2013 and, in a clinic, tested positive by an H7N9 rapid test. Close contacts have minor symptoms and are being monitored and isolated in a hospital.
- The 57-year-old man from Anji County, Zhejiang Province, previously mentioned (*Daily Update of 28 November 2013*), was officially reported to test positive for the H7N9 virus.

NON-OFFICIAL

28/11/2013 – Suspected H7N9 infection in a human, Zhejiang (media)

A new human H7N9 avian influenza case was reported in Zhejiang Province, the fifth in China this autumn, according to local health authorities. The patient, a 57-year-old male from Anji County, tested positive for the H7N9 virus on 27 November 2013 when he went to the First Affiliated Hospital of College of Medicine, Zhejiang University, for treatment for a fever, said the Zhejiang Provincial Health Department. The patient is in critical condition. Epidemiological investigation revealed that the patient's family/home raises six chickens.

26/11/2013 – Suspected H5N1 infection in a human and suspected H5N1 HPAI outbreak in poultry, West Java (Media) - Google Translation

The death of hundreds of chickens in Kebonpedes subdistrict, Sukabumi on Tuesday [11/26/2013] makes people uneasy. The deaths have been going on the last three days allegedly due to H5N1 HPAI. It is estimated that more than 150 chickens owned by residents died at home. But efforts to minimize the transmission are still not optimally done, as a result, in just three days, there are a growing number of dead chickens.

<http://www.pikiran-rakyat.com/node/260098>

26/11/2013 – Suspected H5N1 HPAI outbreak in poultry, Central Java (Media) - Google Translation

Unexpected sudden deaths of hundreds of birds in Kragilan Village, Gantiwarno Subdistrict, Klaten Regency, Central Java, due to avian influenza occurred in the last two months. The sudden death in birds have been going a long time: in Barrocao Hamlet, Kragilan Subdistrict, a villager lost 10 chickens suddenly, and chickens of all neighbors also died suddenly, the total number may have reached to hundreds. The case was reported to the village, but there was no response.

Highly pathogenic avian influenza H5 events

05 June - 05 December 2013

CONTACTS

DISCLAIMER

The EMPRES Animal Influenza Update compiles data on relevant Animal Influenza cases/outbreaks. It is updated weekly, published in PDF format and automatically sent by email to a list of subscribers. We have received many requests to join the Animal Influenza Situation Update distribution list. While we highly value the growing interest and wider distribution, it is hard for us to manage the increasing list of contacts. We would therefore appreciate if the contacts in each organisation/country could forward the document to all relevant people within their organisation/country.

The EMPRES Animal Influenza has been prepared by the EMPRES (Emergency Prevention Programme for Transboundary Animal Diseases) / GLEWS (Global Early Warning for Major Animal Diseases, including Zoonoses) team of the Animal Production and Health Division of the Food and Agriculture Organization of the United Nations.

Additional information on influenza cases/outbreaks can be found in EMPRES-i (<http://empres-i.fao.org/>).

Electronic version of the maps can be found on the website at http://www.fao.org/ag/againfo/programmes/en/empres/maps_new.html

For further information about the EMPRES Animal Influenza Situation Update please contact FAO EMPRES/GLEWS at GLEWS@fao.org

Please note: The current maps still display only cases of H5 highly pathogenic avian influenza and do not yet cover all relevant cases/outbreaks of Animal Influenza in different species, as we are in a transition phase towards the production of new maps representing relevant animal influenza cases/outbreaks. The new maps will be included in this Animal Influenza Update in a couple of weeks.

FAO compiles information from numerous sources (FAO representatives or country missions, FAO reports, OIE, official government sources, European Commission, FAO reference centres, laboratories and FAO collaborators) and produces these composite maps in a representative effort to provide full and accurate information.

FAO welcomes information to clarify disease or infection occurrence in areas that have not been properly depicted (with supporting documentation to make the required changes based on FAO validation and verification procedures). If you want to share relevant information on animal diseases events with GLEWS please send messages to GLEWS@fao.org

MAP: The maps represent occurrences of confirmed or suspected cases of H5 and H5N1 reported over the last 30 days (1st map) and last six months (2nd map). H5 cases are represented for countries where N-subtype characterization is not being performed for secondary cases or when laboratory results are still pending. The original data have been collected and aggregated at the most detailed administrative level.

TEXT: The text represents information obtained within the past 14 days indicating the original date of reporting or publishing of the information. Sources of information are included for easy reference. FAO does not guarantee the accuracy of information of reports included in this update.

TABLES: The outbreaks presented in the tables are referring to the observation date (or the earliest clinical date known) and reported date of the first and last occurrence of an outbreak/case in a country. The affected populations refer to all populations ever affected. The reported date is the date when the occurrence of a disease has been confirmed by an official source. Outbreak of disease or infection means the occurrence of one or more cases of a disease or an infection in an epidemiological unit.
