

Highly pathogenic avian influenza H5 events

17 June - 17 July 2014

Note: A map of H5 HPAI events during the latest six months is shown on the last page. Information on avian influenza A (H7N9) and other influenza types are not included in this map.

Source: FAO's Global Animal Health Information System <http://empres-i.fao.org/empres-i/home>

The current map still displays only cases of H5 highly pathogenic avian influenza. We are in a transition phase towards the production of new maps representing all relevant animal influenza cases/outbreaks.

WHAT'S NEW in this issue?

AFRICAN REGION

Egypt (endemic for H5N1)

- Confirmed H5N1 HPAI outbreaks in poultry (Asyut, Cairo, Fayoum, Gharbia, Giza, Menoufia, Menia, Qena, Sohag)

ASIAN REGION

China

- Confirmed presence of H7N9 virus in poultry (Henan)
- Confirmed presence of H7 antibodies in poultry (Guangdong)
- Confirmed H7N9 infection in a human (Hunan)

Indonesia

- Suspected H5N1 outbreak in poultry (Central Java, North Sulawesi)

AFRICAN REGION

Egypt

OFFICIAL

09/07/2014 and 16/07/2014 Confirmed H5N1 HPAI outbreaks in poultry, Asyut, Cairo, Fayoum, Gharbia, Giza, Menoufia, Menia, Qena, Sohag (FAO Field Officer)

Between 17 June and 8 July 2014, outbreaks of H5N1 HPAI were detected in poultry in 20 locations in 9 governorates namely: Asyut (4), Cairo (1), Fayoum (1), Gharbia (1), Giza (1), Menoufia (2), Menia (3), Qena (2), Sohag (5) Governorates. The outbreaks occurred in households, commercial live bird markets and in one commercial farm. Most of the poultry were un-vaccinated except for the outbreak in the one commercial chicken farm in the Fayoum Governorate, reported through passive surveillance. The other outbreaks were detected by the Community Based Animal Health Outreach (CAHO).

30/06/2014 and 02/07/2014 – Confirmed H5N1 infection in a human, Menia (FAO Field Officer)

The Ministry of Health and Population of Egypt has reported a confirmed case of human infection with avian influenza A(H5N1) virus. The patient was a 34-year-old male from

NOTE: UPDATED INFORMATION IS INDICATED IN RED

Samallot District, Menia Governorate, working as construction worker in Cairo. He developed respiratory symptoms on 15 June 2014. He was admitted to hospital on 22 June 2014 after frequent visits to private physicians with no improvement. Specimens tested positive for H5N1 virus at the Menia sub-national virology laboratory on 24 June 2014. Confirmation was made at Central Public Health Laboratory (CPHL) on 25 June 2014 by RT-PCR. Investigations into the source of infection revealed contact to a poultry market near the home of the case.

27/06/2014 and 02/07/2014 – Confirmed H5N1 HPAI outbreaks in poultry, Beni Suef, Dakahlia, Damietta, Giza, Kafr-el-sheikh, Qena, Sohag (FAO Field Officer)

Between 23 April 2014 [laboratory confirmed on 17 June 2014] and 22 June 2014, H5N1 HPAI outbreaks were detected in poultry in 11 localities in 7 governorates namely: Beni Suef (1), Dakahlia (1), Damietta (1), Giza (1), Kafr-el-sheikh (1) Qena (2), Sohag (4) Governorates. Most of the poultry were un-vaccinated except for the 5 ducks detected in a live bird market in Qena Governorate. The outbreaks in Beni Suef and Kafr-el-sheikh Governorates were in household poultry detected by the Community Based Animal Health Outreach (CAHO); 1 outbreak in Suhag Governorate was in household poultry detected by active surveillance; the rest was in live bird markets detected through active surveillance.

NON-OFFICIAL

24/06/2014 – Suspected H5N1 HPAI in poultry, Menoufia (Media)

The Directorate of Veterinary Medicine of Menoufia detected a new avian influenza outbreak in Shubra Bakhoum, Qesna Region (Sharanis). A number of birds have died and samples tested positive at the Vsahha Central Laboratory.

ASIAN REGION

China

OFFICIAL

09/07/2014 – Confirmed presence of H7N9 virus in poultry, Henan (National Authorities, OIE)

The virological finding in Hualong District, Puyang City, Henan Province [already reported in the animal influenza update issue 620 released on 2 July 2014 as below] has now been reported to OIE. Out of the 30 samples collected on 3 June 2014 in one market* in Hualong District, Puyang City, Henan Province, 2 swab samples tested positive for H7N9 by RT-PCR. [*correction: it was 2 operations in 1 market].

http://www.oie.int/wahis_2/public/wahid.php/Reviewreport/Review?page_refer=MapFullEventReport&reportid=15547

04/07/2014 – Confirmed presence of H7 antibodies in poultry, Guangdong (National Authorities)

According to the national H7N9 monitoring results for the third part of June, out of 34 212 serum samples and 18 372 virological samples (which were collected in 1 778 locations in 20 provinces) 4 chicken serum samples collected in Guangdong Province tested positive for H7.

<http://www.info.gov.hk/gia/general/201407/08/P201407080228.htm>

26/06/2014 – Confirmed presence of H7N9 virus or H7 antibodies in poultry, Guangdong, Henan, Shanghai (National Authorities)

According to the national H7N9 monitoring results for the first and the second third of June, out of 11 512 serum samples and 11 947 virological samples, which were collected in 890 locations in 10 provinces, 2 chicken swab samples collected from 2 markets* in Hualong District, Puyang City, Henan Province tested positive for H7N9; and 39 chicken serum samples tested positive for H7 (1 from a farm in Huizhou City, Guangdong Province, 29 from live bird market(s) and 9 from free-ranging household(s) in Shanghai City).

http://www.moa.gov.cn/sjzz/syj/dwyqdt/201406/t20140626_3951363.htm

http://www.moa.gov.cn/sjzz/syj/dwyqdt/201406/t20140626_3951607.htm

In addition, the Ministry of Agriculture released the “National poultry H7N9 influenza elimination plan” including classification of provinces for surveillance, sampling frequency by target facility types, laboratory responsibilities on testing.

http://www.moa.gov.cn/zwillm/ghjh/201406/t20140625_3950377.htm

Live poultry trading has been permanently banned in urban areas of east China's Zhejiang Province, as of 1 July 2014, to control the spread of H7N9. Only dead and plucked poultry can be traded in urban markets, according to the provincial government. Agricultural authorities in Zhejiang Province have begun to advocate standardized poultry production so meat can be traced back to its producers.

Indonesia

NON-OFFICIAL

16/07/2014 – Suspected H5N1 HPAI in poultry, North Sulawesi (Media) GoogleTranslated

Sudden death occurred again in chickens in Kotamobagu City, Wednesday (9 July 2014), suspected to be due to H5N1. This time, there were not as many dead chickens as in previous weeks. Two chickens in the Motoboi Kecil Village died on Wednesday morning.

<http://totabuan.co/2014/07/kasus-kematian-ayam-mati-mendadak-kembali-terjadi/>

14/07/2014 – Suspected H5N1 HPAI in poultry, Central Java (Media) GoogleTranslated

A total of 26 chickens died suddenly. On July 14, 2014, the Animal Husbandry Department of Fisheries and Marine Resources stated that samples they tested, which were taken from these chickens, were positive for avian influenza by rapid tests. All 26 chickens were located in the hamlet Mojoduwur, RT2/RW6 Klunggen Village, Slogohimo Sub-District, Wonogiri Regency, Central Java Province.

Highly pathogenic avian influenza H5 events

17 January - 17 July 2014

CONTACTS

The EMPRES Animal Influenza Update compiles data on relevant Animal Influenza cases/outbreaks. It is updated weekly, published in PDF format and automatically sent by email to a list of subscribers. We have received many requests to join the Animal Influenza Situation Update distribution list. While we highly value the growing interest and wider distribution, it is hard for us to manage the increasing list of contacts. We would therefore appreciate if the contacts in each organisation/country could forward the document to all relevant people within their organisation/country.

The EMPRES Animal Influenza has been prepared by the EMPRES (Emergency Prevention Programme for Transboundary Animal Diseases) / GLEWS (Global Early Warning for Major Animal Diseases, including Zoonoses) team of the Animal Production and Health Division of the Food and Agriculture Organization of the United Nations.

Additional information on influenza cases/outbreaks can be found in EMPRES-i (<http://empres-i.fao.org/>).

Electronic version of the maps can be found on the website at http://www.fao.org/ag/againfo/programmes/en/empres/maps_new.html

For further information about the EMPRES Animal Influenza Situation Update please contact FAO GLEWS team at GLEWS@fao.org

DISCLAIMER

Please note: The current maps still display only cases of H5 highly pathogenic avian influenza and do not yet cover all relevant cases/outbreaks of Animal Influenza in different species, as we are in a transition phase towards the production of new maps representing relevant animal influenza cases/outbreaks. The new maps will be included in this Animal Influenza Update in a couple of weeks.

FAO compiles information from numerous sources (FAO representatives or country missions, FAO reports, OIE, official government sources, European Commission, FAO reference centres, laboratories and FAO collaborators) and produces these composite maps in a representative effort to provide full and accurate information.

FAO welcomes information to clarify disease or infection occurrence in areas that have not been properly depicted (with supporting documentation to make the required changes based on FAO validation and verification procedures). If you want to share relevant information on animal diseases events with GLEWS please send messages to GLEWS@fao.org

MAP: The maps represent occurrences of confirmed or suspected cases of H5 and H5N1 reported over the last 30 days (1st map) and last six months (2nd map). H5 cases are represented for countries where N-subtype characterization is not being performed for secondary cases or when laboratory results are still pending. The original data have been collected and aggregated at the most detailed administrative level.

TEXT: The text represents information obtained within the past 14 days indicating the original date of reporting or publishing of the information. Sources of information are included for easy reference. FAO does not guarantee the accuracy of information of reports included in this update.

TABLES: The outbreaks presented in the tables are referring to the observation date (or the earliest clinical date known) and reported date of the first and last occurrence of an outbreak/case in a country. The affected populations refer to all populations ever affected. The reported date is the date when the occurrence of a disease has been confirmed by an official source. Outbreak of disease or infection means the occurrence of one or more cases of a disease or an infection in an epidemiological unit.
