

COP 21

Conference - Soil fertility and climate: the challenges of the development of soil conservation agriculture worldwide

Space Generation Climate - Room 8 - December 5, 2015, from 5:15 p.m. to 6:45 p.m.

The conference, organized at the International Soil day will allow all those interested in the future of agriculture and agro-ecology to better understand the issues related to soil fertility and for climate and environment in general.

This conference will give voice to farmers who practice soil conservation agriculture, in France but also around the world, and thus contribute daily to fight against global warming.

Join us ! (free admission)
