

Objective:

The Ninth OCEANIAFOODS Conference will be held at UNSW Australia in Sydney, 9 July, 2016 in association with the 2nd Australia/OCEANIAFOODS Training Course on *"Food Composition: Data Quality and Evaluation"*.

At this Ninth Conference discussions will be held on issues such as improving collaboration within the region and technical seminars on the importance of data quality and evaluation in nutritional epidemiology, dietary surveys and critical nutrient data issues in Oceania related to fortification of foods.

Registration :

Early bird Registration until 31 May 2016	Regular registration after 31 May, 2016
\$200	\$300

Registration fee includes: attendance at the Scientific Sessions,, morning and afternoon teas and lunch .

Topics include:

- Oceaniafoods activities (Pacific, Australia, New Zealand)
- Analytical data quality
- Fortification and monitoring in the OCEANIAFOODS region

Ninth OCEANIAFOODS Conference

9 July 2016

UNSW Australia

Data Quality and Evaluation in Nutrition

The Ninth OCEANIAFOODS conference will be held at the University of New South Wales in Sydney, 9 July, 2016 in association with the 2nd Australia/OCEANIAFOODS Training Course on “*Food Composition: Data Quality and Evaluation*”.

OCEANIAFOODS was established in May 1987 as a regional group of the International Network of Food Data systems (INFOODS). It facilitates interaction and collaboration of those working in the area of food composition in the Oceania region. Core membership consists of representatives from programs of food composition tables and databases, and their associated analytical laboratories. Conferences are held every two to three years. The first OCEANIAFOODS Conference was held in Canberra in May, 1987, organized and hosted by the Nutrition Section of the Commonwealth Department of Community Services and Health.

Collaboration in the past under OCEANIAFOODS has assisted the development of a world-class nutrient laboratory at the University of the South Pacific, two volumes of the Pacific Island Food Composition Tables, and increased regional collaboration in food composition work in addition to continuing national programs.

This conference has been convened by Australia as collaboration between UNSW ARC Training Centre for Advanced Technologies in Food Manufacture and Food Standards Australia New Zealand.

At this Ninth Conference discussions will be held on issues such as improving collaboration within the region and technical seminars on the importance of data quality and evaluation in nutritional epidemiology, dietary surveys and critical nutrient data issues in Oceania related to fortification of foods.
